Saturn
CL-MB950

The Gemini Series balances robust engineering with understated architectural elegance, with luminaires designed to bring depth, texture and atmosphere to both architectural and garden environments. The Saturn hanging light is a single spotlight which can be easily hung from high vantage points, providing practical access lighting with a dynamic moon lighting effect. Lights can be hung in trees and pergola structures with wire or chain and come with 1 meter of cable as standard..

Designed and manufactured in Australia, each fitting is CNC lathed and milled from solid solid brass, combining durability with finely resolved craftsmanship. The solid brass finish will patina over time but will remain rust-free and withstand even the harshest coastal settings.
